

FOR IMMEDIATE RELEASE

Insider Trading Detection Service Goes Global

October 5, 2011-Greenwich, CT. Financial Tracking Technologies, LLC announced today that it has expanded the coverage of its Insider Trading Detection (ITD) compliance module to include international markets. Insider Trading Detection and its companion module, MarketACE™ database, automatically consolidates events (ACE) and news on a company-by-company basis. Next, it compares market action, events and news vs. employee or company managed portfolio transactions, or both, and signals when a trade occurs prior to the market moving issuer event.

“ITD and MarketACE™ is the industry’s most comprehensive tool for helping identify possible mis-use of material non-public information,” said Tony Turner, principal of the company. “This expanded module now gives clients global coverage, if desired, and includes 19 countries and 23 regulatory jurisdictions. The independent nature of what we do has proven valuable during internal risk reviews, regulatory exams and client due diligence meetings,” Turner said. The compliance module integrates with its Employee TradeSphere™ module and other commercial employee trading and compliance workflow platforms. Employee TradeSphere™ has more direct software interfaces than any other platform for gathering and aggregating employee trades and holdings information automatically.

About Financial Tracking Technologies, LLC

We are the proven leader in reducing costs through automated compliance multi-tools all offered on a modular, a la carte basis. The SEC is a client. Our independent solutions enable positive proof that policies, procedures and internal controls exist and operate effectively. Clients using our services, which include retail and institutional BDs, money managers, mutual funds, hedge funds, fund of funds, regulators, private equity and public companies, no longer endure the arduous and daunting tasks of data gathering and analysis, heretofore manual, ad hoc and prone to errors.
