

FOR IMMEDIATE RELEASE

New compliance software release is turn-key for hedge funds and private equity firms

March 10, 2011 Greenwich, CT. Financial Tracking Technologies, LLC announced today the release of **RegSphere™**, a new version of its compliance software specifically for hedge funds, fund of funds and private equity firms, which provides the only turnkey solution for the fast approaching regulations. **RegSphere™** is a robust solution that contains 13 compliance modules heretofore sold separately.

"We've been working with our hedge fund clients to produce this complete solution since last year," said Tony Turner, principal of the company. "For the first time, both registered and newly registered organizations can have a host of solutions on one console and minimize compliance costs" he said.

RegSphere™ includes the following solutions:

- employee personal trading,
- insider trading detection,
- advertising review,
- self-dealing,
- document management,
- valuation testing,
- best execution,
- anti-money laundering,
- 13D,13F and 13G filing analysis,
- idea allocation checking,
- Form PE and automated stress testing,
- pay-to-play solutions, and
- **CV365**, the intelligent compliance calendar.

"The single platform enables a quantifiable, verifiable compliance program for regulators and clients. Best of all, clients can customize each module via a rules library so that it fits the facts and circumstances of their company; it's the best value bar none" said Turner. The intelligent compliance calendar automatically notifies compliance teams of filing requirements, tracks compliance rationale, testing, workflow and generates compliance reports on demand. Clients may continue to purchase the modules on an ala carte basis.
